

# Emmanuel Cousin

Senior Software Engineer · Technical Lead · Engineering Mentor

[emmanuel@hey.com](mailto:emmanuel@hey.com) · [emcousin.github.io](https://emcousin.github.io) · [LinkedIn](#)

## Profile

---

I'm a software engineer at Circle, working on payments. Over the past 10+ years, I've built web products, led technical projects, and mentored engineers. I orchestrate AI workflows from investigation and specs through implementation and review. That lets me ship faster than ever and spend more of my time building products, with less spent writing code by hand.

## Experience

---

### Senior Software Engineer at Circle

March 2026 to present · Payments Platform

I work on checkout, subscriptions, paywalls, and access to paid content.

- Made checkout safer by protecting payment details from unauthorized changes and preventing repeated clicks or retries from processing the same purchase twice.
- Built Circle AI features that let business owners manage paid memberships and change subscriptions through a conversation, with a chance to review and confirm changes.
- Helped business owners set up Stripe payments inside Circle. Improved the mobile experience and added AI help to explain missing account details.
- Fixed unfinished purchases that left unwanted subscriptions behind and billing records that no longer matched Stripe. Helped the team use AI more effectively through smaller changes and clearer review feedback.
- Ported Paywalls AI, our team's internal AI framework, to OpenCode so the team could use different AI providers without depending on Claude.

### Core Maintainer at Gumroad (Antiwork) · Contract

August 2025 to March 2026

Led frontend modernization and shipped billing and fraud detection features in Gumroad's open-source codebase.

- Planned the migration to Inertia.js and React, split the work among contributors, and helped migrate 25+ pages in 3 weeks.
- Shipped Stripe subscription restart features and fraud detection improvements. Reviewed 425+ PRs and authored 68 merged PRs in 6 months.
- Coordinated delivery of 270,000+ personalized Year in Review emails and maintained upgrades, security fixes, and CI/CD.

### Senior Software Engineer at Spring.net · Contract

June 2024 to April 2025

Redesigned investment allocation for deals before and after token launch. Selected InfluxDB for price history and improved code quality through reviews and refactoring.

### Senior Software Engineer at Reprtoir · Contract

July 2021 to April 2024

Built search and analytics for music rights holders, including searches based on natural-language descriptions and similar compositions.

## Earlier experience

---

### Lead Developer at Small Door Veterinary · Contract

January 2021 to July 2021

Helped bring development in-house as the business expanded to multiple practices. Recruited the Head of Product and Technology and 2 senior developers, set engineering processes, and led web and mobile work.

### Senior Developer at Braidio · Contract

February 2019 to January 2021

Built web and mobile features for a healthcare product, integrated third-party services, and improved data protection as the company worked toward HIPAA certification.

### Developer at CheckSub · Freelance

January 2018 to July 2018

Automated transcription workflows and built a subtitle editor for audio content.

### Web Developer at My Job Glasses

July 2017 to December 2017

Helped launch the V2 platform and introduced Kanban and cross-team processes.

### Web Developer at Captain Contrat

January 2015 to July 2017

First salaried developer. Built scheduling, dashboards, and automated invoicing. Introduced Agile/Lean practices and mentored a junior engineer as the company grew from 3 founders to 34 people.

## Mentoring

---

### Volunteer Programming Mentor at First Ruby Friend

March 2023 to present

Mentor aspiring engineers through Ruby exercises, projects, code review, and career guidance.

## Technical experience

---

Payments and subscription billing, Stripe, Ruby on Rails, React, TypeScript, search and analytics, AI tools, specifications, code review, and agent workflows.

## Selected open source

---

[Glint G2](#): Signal, WhatsApp, and HEY on Even G2 glasses, with voice replies.

[Parkour Paris](#): class registration, scheduling, and payments.

Ruby tools: [grape-jsonapi](#) · [activerecord-deepstore](#) · [activemodel-caching](#) · [provet-client](#)

## Education and languages

---

Engineer Manager Entrepreneur, ITEEM, École Centrale de Lille (2007 to 2012)

Applied Sciences exchange, Université de Sherbrooke (2011 to 2012)

English, French, and Portuguese
